

# Woolston Eyes Flora

## Flowers

The following list of all the species found and identified at Wooslton Eyes is certainly not exhaustive, indicated by the new identifications in each subsequent survey. Habitat changes will impact species decline and new colonisation. The names in brackets are 'other' names the species may be known as. The list does not give any indication of the relative abundance of each species but the 'Notes' against the species relate to the particular survey work and date of identification and are referenced as:

**A** = list taken from a 1980 "AN ECOLOGICAL SURVEY". The location of the plants was not given.

"MANAGEMENT PLAN" list published in 1985 but compiled from data collected over an unknown period. The headings are as follows:

- **1 to 4** = the number of the bed
- **B** = the area to the East of No.1 bed before it was lost to waste disposal.
- **C** = flora recorded at Woolston but with the location not given

**D** = list abstracted from an article by D McNaughton published in the 1983 Annual Report.

The list abstracted from three articles published in the 1985 Annual report:-

- **E** = from "Aquatic Flora and Fauna" by A Cook
- **F** = from "Butchersfield!" by D McNaughton
- **G** = from "Trees along the Mersey" by P J Nichols. It has been assumed that the trees were planted on the Eyes!

**H** = list from a 1990 survey carried out by the "CHESHIRE CONSERVATION TRUST Ltd", (organised by Mrs E M Nall) on No.3 Bed in the summer of 1990.

**J** = list of the new/interesting species found in a survey carried out by Mrs R Martin in 1995-1996.
